

PsyMind Clinic – Client Behaviour & Revenue Analysis

1. Business Context

PsyMind Clinic is a growing mental health service provider offering therapy sessions across multiple psychologists. The clinic operates in an increasingly competitive wellness industry where client acquisition, retention, and service optimization directly impact revenue.

Despite steady operations, leadership faced key concerns:

- Declining revenue trends despite consistent session volume
- Unclear understanding of which client segments drive engagement
- Limited visibility into high-impact referral channels
- No structured insight into issue types driving demand

The absence of data-driven clarity was affecting **marketing spend efficiency, resource allocation, and long-term growth strategy**.

2. Objective

The analysis was designed to answer critical business questions:

- Which referral channels generate the most clients?
- What are the primary mental health issues driving demand?
- How is revenue trending over time, and where are the risks?
- Which psychologists contribute most to revenue?
- How do session preferences vary across age groups?
- What client segments should be prioritized for growth?

3. Dataset Overview

The dataset represents clinic operations data, including:

- **Client Data:** Age, referral source, first visit date
- **Session Data:** Session count, mode (online/offline)
- **Revenue Data:** Session-level revenue aggregated annually
- **Psychologist Data:** Revenue contribution by practitioner
- **Issue Types:** Categorized mental health concerns

Scope:

- ~500 clients
- ~7,000 sessions
- Multi-year data (2022–2024)

Data Quality Notes:

- Minimal cleaning required (pre-processed in Excel)
- Standardized categorical fields (referral sources, issue types)
- Consistent date formatting enabled time-based analysis

4. Data Cleaning & Preparation

Although the dataset required limited cleaning, key preprocessing steps in excel ensured analytical accuracy:

- **Standardization of categorical values**
 - Prevented duplication in referral sources (e.g., “Google” vs “Google Search”)
 - Ensured accurate attribution of client acquisition channels
- **Date formatting and extraction**
 - Enabled year-wise revenue trend analysis
 - Critical for identifying performance decline
- **Aggregation consistency**
 - Ensured session counts and revenue aligned across dimensions
 - Avoided misrepresentation in KPI reporting

These steps were essential to maintain **trust in KPI outputs and stakeholder decision-making**.

5. Analysis Approach

The analysis focused on defining business-relevant KPIs:

- **Client Metrics**
 - Total Clients
 - Average Age
 - Acquisition Source Distribution
- **Operational Metrics**
 - Total Sessions
 - Session Mode Split (Online vs Offline)
- **Financial Metrics**
 - Total Revenue
 - Annual Revenue Trend
 - Revenue by Psychologist
- **Demand Metrics**
 - Top Mental Health Issues (Top N filtering)

Approach Logic:

- Segmented analysis across **age groups** to identify behavioural patterns
- Time-series analysis to detect **revenue decline trends**
- Contribution analysis to identify **high-performing psychologists**
- Distribution analysis to optimize **marketing channels**

6. Dashboard Explanation

The dashboard is structured for executive-level decision-making:

Top KPI Section

- **Total Clients (500):** Overall reach
- **Total Sessions (6,982):** Engagement intensity
- **Total Revenue (₹17.5M):** Financial performance
- **Average Age (33.41):** Core customer demographic

Referral Source Distribution

Answers: *Where are clients coming from?*

- Doctor referrals lead acquisition
- Digital channels (Google, Instagram) show strong contribution
- Walk-ins and personal networks remain relevant

Annual Revenue Trend

Answers: *Is the business growing sustainably?*

- Revenue declines sharply from 2023 to 2024
- Signals potential issues in retention, pricing, or acquisition quality

Top Issue Types

Answers: *What problems are clients seeking help for?*

- Depression, Anxiety, and Work Stress dominate demand
- Panic Disorder and Grief follow closely

Session Mode by Age Group

Answers: *How do different age groups prefer therapy?*

- Younger groups show balanced preference
- Older clients strongly prefer **offline sessions**
- Seniors (65+) show highest offline dependency

Revenue by Psychologist

Answers: *Who drives revenue?*

- Revenue is evenly distributed

7. Key Insights (Critical Business Value)

1. Revenue Decline Despite Stable Demand

- **What:** Revenue dropped significantly in 2024
- **Why:** Likely due to lower session value, reduced repeat visits, or shift in client mix
- **Impact:** Immediate risk to profitability and sustainability

2. Doctor Referrals Are the Strongest Acquisition Channel

- **What:** Highest client inflow comes from doctors
- **Why:** Trust-based referral system in healthcare
- **Impact:** Strong opportunity to scale partnerships

3. Digital Channels Are Underutilized Growth Drivers

- **What:** Google and Instagram contribute significantly but not leading
- **Why:** Likely limited marketing optimization
- **Impact:** Scalable and cost-efficient acquisition opportunity

5. Demand is Concentrated Around Core Mental Health Issues

- **What:** Depression, Anxiety, and Work Stress dominate
- **Why:** Reflects modern lifestyle and workplace pressures
- **Impact:** Opportunity to create specialized programs/services

6. Offline Preference Increases with Age

- **What:** Older clients strongly prefer in-person sessions
- **Why:** Comfort, trust, and technology barriers
- **Impact:** Hybrid service model is essential for retention

8. Recommendations

1. Address Revenue Decline Immediately

- Analyze pricing strategy and session frequency

2. Reduce Dependency Risk

- Distribute clients across psychologists
- Build personal branding for other practitioners

3. Scale Doctor Referral Network

- Formalize partnerships with clinics/hospitals
- Introduce referral incentives

4. Invest in Digital Acquisition

- Optimize SEO and paid search campaigns
- Increase targeted Instagram outreach for younger demographics

5. Launch Specialized Therapy/Workshop Programs

- Focus on:

- Workplace stress management
- Anxiety treatment programs
- Package services for higher value per client

6. Strengthen Hybrid Service Delivery

- Maintain strong offline presence for older clients
- Improve online experience for younger segments

9. Conclusion

This analysis transformed raw clinic data into actionable business intelligence:

- Identified **revenue risks and growth bottlenecks**
- Highlighted **high-impact acquisition channels**
- Revealed **client behavior patterns across demographics**
- Enabled **targeted, data-driven strategic decisions**

The outcome supports leadership in moving from reactive operations to a **scalable, insight-driven growth strategy**.
